YouTube Content Ideas

Three video ideas synthesised by the agent from the rest of this PDF, engineered to plausibly hit 10M views. Each ships with a hook, a thumbnail concept, and a 5-beat outline you can shoot the same week.

1. The Government Just Banned This AI

HOOK (FIRST 8S)

Three days after Anthropic shipped its most powerful AI ever, the U.S. government forced them to switch it off - worldwide. Before it's gone for good, here's exactly what you could build with a model this strong, and the cheaper one I'd use instead.

Why it hits 10M: ["'microsoft anthropic claude fable restriction' is a top rising query this week (ai_search_trends) - huge built-in search demand the second it's published.", 'The Fable 5 / Mythos 5 shutdown is the dominant story across anthropic_claude_news - government + frontier AI + controversy is peak shareability.', 'Pivoting from the news hook into a hands-on build with a swappable model (new_ai_tools) gives the practical payoff that turns curiosity views into watch-time.']

Thumbnail: Red 'BANNED' stamp slammed over the Claude logo, a shocked face on the left, bold three-word caption 'GONE IN 3 DAYS'.

- 0:00 Hook - 'The most powerful AI on earth got switched off 3 days after launch.'
- 0:30 What Fable 5 actually was and why governments panicked (plain-English).
- 1:30 Live: I rebuild the same workflow on a still-available model so you're not locked out.
- 3:30 The surprising part - a 12x-cheaper open model does most of it anyway.
- 5:30 Payoff: the provider-agnostic setup you should copy today + subscribe CTA.

2. I Built an AI Employee in 20 Minutes

HOOK (FIRST 8S)

Everyone is Googling 'what is an AI agent' but nobody actually shows you one doing real work. So I built an AI employee live, in 20 minutes, with zero code - and by the end it had already taken over three of my daily tasks.

Why it hits 10M: ["'what is ai agents' and 'what is ai automation' are both top-5 rising searches right now (ai_search_trends) - enormous beginner demand with almost no good hands-on answers.", "New agent-builder tools like Firecrawl's Prometheus (new_ai_tools) make a fast, believable on-camera build that beginners can copy the same day.", "The 'AI is coming for your job' anxiety surfaced in unaddressed_ai_problems gives the video an emotional pull on top of the how-to value."]

Thumbnail: Split screen: an empty office chair on the left, a glowing 'AI EMPLOYEE' dashboard on the right, bold caption '20 MIN, NO CODE'.

- 0:00 Hook - 'This AI employee replaced 3 of my tasks in 20 minutes.'
- 0:40 What an AI agent actually is, explained with one real example.
- 1:40 Live build - connect tools, give it a goal, watch it run.
- 4:30 It does my real task on camera + the one gotcha that breaks beginners.
- 6:00 Payoff: the exact template to clone, then subscribe CTA.

3. This \$0.01 AI Beats the \$100 One

HOOK (FIRST 8S)

What if a free, open AI could do ninety percent of what Claude and GPT-5.5 do - for one-twelfth of the price? I put Kimi K2.7 head-to-head against the expensive models on real work, and the result will change how you build.

Why it hits 10M: ['Kimi K2.7 undercutting GPT-5.5 and Claude by up to 12x is breaking right now in anthropic_claude_news - fresh, specific, and surprising.', "It directly solves the runaway 'token-maxing' cost pain that even Microsoft and Meta are publicly fighting (ai_business_automation) - practical money-saving value.", "'claude new model' and 'fable llm' are top rising searches (ai_search_trends), so model-comparison content rides an existing wave of attention."]

Thumbnail: Huge lime '12X CHEAPER' text, two model logos on a balance scale tilting hard to the cheap side, shocked face in the corner.

- 0:00 Hook - 'A one-cent AI just embarrassed a hundred-dollar one.'
- 0:30 The setup - same three real tasks, expensive model vs. open model.
- 1:30 Round-by-round results on screen (coding, summarizing, automation).
- 4:00 Where the cheap model breaks - and where it absolutely wins.
- 5:30 Payoff: the hybrid stack that cuts your AI bill 80% + subscribe CTA.

OpenAI adds flexible rate-limit resets to its Codex coding agent

QUICK TAKE

OpenAI introduced flexible rate-limit resets for its Codex coding agent, letting heavy users keep working without hard cutoffs - an opening move in AI-coding price wars against Claude Code. Microsoft CEO Satya Nadella admits he's a token-maxer, too: "It's addictive"

QUICK TAKE

Microsoft CEO Satya Nadella warns against 'token-maxing' - reflexively throwing the most powerful (and costly) frontier models at every task. He argues frontier models should be reserved for hard problems while cheaper models handle routine work, calling the overspend habit 'addictive.' It signals a cost-discipline shift among the biggest AI buyers. Automation angle: Right-size the model per step in your builds - cheap models for routine work, frontier only where it earns its cost.

Microsoft's SkillOpt boosts GPT-5.5 by using nothing but a trained Markdown file

QUICK TAKE

Microsoft and three Chinese universities introduced SkillOpt, which optimizes the instruction/skill documents fed to AI agents instead of fine-tuning weights. It reportedly boosts GPT-5.5 using nothing but a trained Markdown skill file. The result hints that skill engineering can rival model upgrades. Automation angle: Treat your agent's instruction files as a tunable asset - version and A/B-test them like code.

Doctors Inject Human Subjects With First Vaccine Designed by AI

QUICK TAKE

Doctors have injected human subjects with the first vaccine designed by AI, which researchers call a fundamental shift in pandemic preparedness. The AI-generated candidate moved from design to human trial far faster than traditional pipelines. It's early proof generative models can produce real, testable biomedical artifacts. Automation angle: Biotech is a fresh vertical for AI-automation portfolios - design-to-validation pipelines are wide open.

Apple's new AI photo editing tools mostly work, for better and worse

QUICK TAKE

Apple shipped its first serious AI photo-editing features in iOS 27 - reframe, extend, and clean-up - on the world's most popular camera. Reviews say they mostly work but raise authenticity questions now that heavy edits are one tap away. It pushes generative editing into the mainstream. Automation angle: On-device generative editing is now a consumer expectation - factor it into any media tooling you pitch.

The future of Hollywood isn't feeding prompts into vanilla gen AI models

QUICK TAKE

The Verge argues the future of AI in film isn't feeding prompts into vanilla generative models - those projects still feel hollow. The real craft is emerging from bespoke pipelines and human-directed workflows layered on top of AI. It reframes 'AI filmmaking' as orchestration, not one-shot generation. Automation angle: Sell workflows and pipelines, not raw model output - that's where durable value sits.

Meta shifts from "tokenmaxxing" to token managing as internal AI costs reportedly hit billions

QUICK TAKE

An internal memo to ~6,000 Meta employees reveals internal AI usage is heading toward billions in cost, prompting a shift from 'tokenmaxxing' to disciplined token management. From 2027 Meta will impose budgets, allocations, and a central 'AI Gateway' dashboard. Even hyperscalers are now rationing inference spend. Automation angle: LLM-spend governance dashboards are a concrete product you could build for mid-size firms.

Visa is handling AI-prompted transactions for OpenAI - but can you trust it?

QUICK TAKE

Visa is now handling AI-prompted ('agentic') transactions for OpenAI, a step toward agents making real purchases on a user's behalf. Experts flag trust, authorization, and fraud questions that aren't fully solved. It's an early rail for agentic commerce. Automation angle: Agent-initiated payments are coming - designing safe human-in-the-loop approval flows is a sellable skill.

A Court Has Ruled That Google Is Liable for False Statements Generated by AI Overviews

QUICK TAKE

A court ruled Google is legally liable for false statements generated by its AI Overviews, holding that whoever designs, trains, and operates an AI system owns the damages from its outputs. It's a landmark on AI accountability. Expect tighter guardrails on generative search. Automation angle: Build verifiable, source-cited outputs into your agents - liability is shifting onto the operator.

Over half of Americans fear losing jobs and independent thinking to AI

QUICK TAKE

An Anthropic survey of ~52,000 Americans found over half fear losing both their jobs and their independent thinking to AI. No one has solved how to deploy AI at work without eroding worker skill and agency - a gap affecting employees in every sector. Automation angle: 'Augment, don't replace' deployments that preserve human judgment are a differentiated way to sell automation.

Meta's new AI superintelligence unit described as a 'soul-crushing gulag'

QUICK TAKE

Engineers inside Meta's months-old superintelligence unit (~6,500 people) describe it as a 'soul-crushing gulag' on the verge of revolt. The unsolved problem: even well-funded labs can't retain the talent that builds the models under brutal pressure. Automation angle: Talent churn at big labs means openings for nimble independents - and a cautionary tale on burnout.

Employers still can't define the AI skills they're hiring for

QUICK TAKE

A YourStory analysis finds that despite the hype, employers in 2026 still can't clearly define the AI skills they need, leaving job-seekers guessing and hiring slow.
