YouTube Content Ideas

Three video ideas synthesised by the agent from the rest of this PDF, engineered to plausibly hit 10M views. Each ships with a hook, a thumbnail concept, and a 5-beat outline you can shoot the same week.

1. I Made Opus Plan and a Cheap Model Do the Work

HOOK (FIRST 8S)

Cursor just proved you don't need the expensive model for 90% of your coding - here's the exact setup that cut my AI bill by 70%.

Why it hits 10M: ["Rides the viral Cursor agent-swarm 'rebuild SQLite in Rust' result that's trending right now (new_ai_tools).", "Cost-cutting is the #1 anxiety for indie builders - 'slash your AI bill' hooks over-index on saves and shares (ai_business_opportunities).", 'Plan-with-strong/execute-with-cheap is a concrete, copyable pattern, not theory - high completion rate (new_ai_tools).']

Thumbnail: Split screen: a glowing 'OPUS 5 (PLANNER)' brain on the left wired to three tiny cheap-model robots coding on the right, big red '-70% COST' stamp.

- Cold-open the Cursor SQLite-in-Rust result and the bill I used to pay.
- Explain the plan-with-strong, execute-with-cheap idea in 30 seconds with a diagram.
- Build it live: Opus plans, a cheap model executes sub-tasks via MCP in Claude Code.
- Run it on a real feature and show the token/cost dashboard before vs after.
- Give the viewer the exact prompt + repo template and challenge them to beat my number.

2. AI Doctors Are Selling Fake Cures - I Built the Detector

HOOK (FIRST 8S)

Meta is letting fake AI doctors sell quack cures to sick people - so in one week I built the tool that catches them.

Why it hits 10M: ["Piggybacks a rage-and-fear news cycle (Meta fake AI doctors) that's already spreading (unaddressed_ai_problems).", "'Vulnerable people being targeted' triggers moral outrage - the highest-sharing emotion on the platform (unaddressed_ai_problems).", 'Shows a real, buildable solution in a week - proves AI automation as a force for good, huge for saves (ai_business_opportunities).']

Thumbnail: A deepfake 'doctor' in a white coat with a glitching face and a red 'FAKE' scanner box around it, subtitle 'I built this in 7 days'.

- Show the actual fake-AI-doctor ads and who they target.
- Frame the unsolved problem: detection can't keep up with generation.
- Design an impersonation-flagging pipeline live with Claude Code.
- Test it on real ad creative and watch it catch the fakes.
- Open-source the demo and pitch it as a portfolio/startup wedge.

3. Opus 5 Just Broke the Test Built to Beat AI

HOOK (FIRST 8S)

A benchmark designed so AI would fail - Opus 5 just quadrupled the record on it, and most people have no idea what that means.

Why it hits 10M: ["News-jacks the Opus 5 ARC-AGI-3 breakthrough (30.2% vs 7.8%) while it's fresh (anthropic_claude_news).", "'The test built to stop AI' is an irresistible curiosity-gap hook that stops the scroll (ai_model_benchmarks).", 'Explainer format on a scary-exciting AGI milestone travels far beyond the AI niche (ai_search_trends).']

Thumbnail: A cracked padlock labeled 'ARC-AGI-3' with '7.8% -> 30.2%' in huge numbers and a shocked-face reaction cutout.

- Explain what ARC-AGI-3 is and why it was built to be AI-proof, in plain English.
- Show the jump from 7.8% to 30.2% and why quadrupling matters.
- Demo Opus 5 solving a novel puzzle it couldn't have memorized.
- Sober counterpoint: what this still can't do, using the 'AI mania' critique.
- What it means for your job and what skill to build next.

76 Quantum Theorems Completed By AI In New Lean 4 Benchmarks - Quantum Zeitgeist

QUICK TAKE

An AI system completed 76 quantum-information theorems in new Lean 4 formal-proof benchmarks, showing agent models can produce machine-checkable proofs in quantum math. It's early evidence AI can accelerate quantum-algorithm research, not just classical coding. Automation angle: Formal-proof agents are a rising niche - a small Lean + LLM demo is a differentiated portfolio piece.

Recursive self-improvement, AGI progress, alignment research.

AREX: Towards a Recursively Self-Improving Agent for Deep Research

QUICK TAKE

AREX is a recursively self-improving agent for deep research: it decomposes hard multi-constraint questions and verifies candidate answers constraint-by-constraint, using cheap verification to bootstrap harder discovery. It's a concrete self-improvement loop rather than a manifesto. Automation angle: The verify-then-improve pattern is directly reusable - build a research agent that grades its own drafts before returning them.

White Box Evidence Packages for Policy Audit Reports

QUICK TAKE

This arXiv paper asks how reviewers can verify whether an LLM-generated audit report is actually supported by evidence, proposing 'white-box evidence packages' that tie each claim to its source. It's a step toward auditable AI oversight beyond raw benchmark scores. Automation angle: Evidence-linked output is a sellable feature - bolt citation-grounding onto any client-facing AI report you build.

Cursor's agent swarm suggests cheaper models can handle most coding when frontier models plan the work

QUICK TAKE

Cursor asked its upgraded agent swarm and its predecessor to rebuild SQLite in Rust from documentation alone, with no source code. The result suggests cheaper models can handle most coding once a frontier model plans and decomposes the work. It's a concrete blueprint for the plan-with-strong, execute-with-cheap pattern. US reportedly favors selective bans over blanket restrictions on Chinese open weight models citing security concerns

QUICK TAKE

The Trump administration reportedly favours targeted bans on specific Chinese AI models over a blanket ban, citing security; OpenAI and Google DeepMind signed an open letter opposing broad restrictions. Model provenance and open-weight policy are now geopolitical questions. Automation angle: Track which open models stay compliant in your region before standardizing a build on them.

Unaddressed AI Problems

Real problems in AI that nobody is solving - gaps & unmet needs.

Meta Is Letting Fake AI-Generated Doctors Sell Quack Cures on Its Platforms

QUICK TAKE

Meta is allowing AI-generated 'doctors' to hawk unproven cures across its platforms, targeting people with health conditions. Platform-scale detection of AI-impersonated professionals is unsolved, and moderation lags generation - the victims are the most vulnerable users. Automation angle: Build a demo that flags AI-generated medical/authority impersonation in ad creative - a concrete one-week Claude Code portfolio piece.

Hundreds asked ChatGPT for poison and bioweapon recipes and some got step-by-step high school level guides

QUICK TAKE

The WSJ reports hundreds of users elicited step-by-step poison and bioweapon guidance from ChatGPT, and OpenAI downgraded GPT-5's risk rating despite internal high-risk flags. Reliable adversarial safety evals for dangerous-capability elicitation are still an open problem, and red-teaming lags model releases. Automation angle: A reusable red-team harness that scores a model's refusal robustness is both a portfolio standout and a real gap labs are hiring for.

Meta Desperately Trying to Ban Creeps Misusing Its AI "Pervert Glasses"

QUICK TAKE

Meta is scrambling to ban misuse of its AI smart glasses for covert recording after the fact, showing safety bolted on post-launch. Real-time consent and privacy controls for always-on wearable AI don't exist yet, and the gap widens as the hardware ships. Automation angle: Prototype an on-device 'recording-intent' detector or consent-signal system - a timely privacy-tech demo.

Cheaper, open and intelligent: Chinese AI models gain ground, as they make inroads in the US

QUICK TAKE

Cheaper, capable open-weight Chinese models are being adopted by US users and businesses to cut inference costs. That opens a clear arbitrage: build vertical AI apps on cheap open models for SMBs priced out of frontier APIs. Automation angle: Start a 'cost-optimized AI' service that migrates clients from expensive frontier APIs to tuned open models and bill a share of the savings.

The AI coding tutor paradox grows as educators scramble to rethink how they test real skills

QUICK TAKE

An ACM survey finds 68% of CS educators across 49 countries have already changed exams because students lean on AI - but authentic-skill assessment remains unsolved. That's an open edtech market: project-based eval, proctoring, and AI-use-aware grading, and hiring teams face the same verification gap. Automation angle: Build an AI-era skills-assessment tool (verifiable project rubrics + interview-style checks) for bootcamps and hiring teams - a fresh, underserved niche.
