Ukraine to pick AI models **operated** without provider control, official says

Ukraine will prefer AI models it can run on its own servers for government services, avoiding dependence on remote systems that providers can restrict or switch off. It is one of the clearest sovereign-AI procurement policies stated by any government at war.

TODAY'S SPOTLIGHT ROLE

Customer Journey Specialist - Gympass

Jobicy . ★★★★★

WHY IT FITS

Gympass is hiring: Customer Journey Specialist. Wellhub (formerly Gympass) is a workplace-wellness platform connecting employees to fitness, mindfulness, therapy and nutrition partners; this remote role owns the customer journey across those touchpoints. Worldwide-remote and junior-friendly, but note it is CX-flavoured rather than a pure AI-automation build role.

YouTube Content Ideas

Three video ideas synthesised by the agent from the rest of this PDF, engineered to plausibly hit 10M views. Each ships with a hook, a thumbnail concept, and a 5-beat outline you can shoot the same week.

1. Claude Now Works While Your Laptop Is CLOSED

HOOK (FIRST 8S)

I gave an AI a full day of work, shut my laptop, and went out. This is what was waiting for me when I got back.

Why it hits 10M: ["anthropic_claude_news: Claude Cowork launched on mobile and web THIS WEEK - Wired's own headline is 'Shut Those Laptops', so the search wave is cresting right now.", "ai_search_trends: 'claude ai', 'is claude down' and 'claude status' are all in today's top global + India rising queries - massive unmet search demand for Claude content.", "ai_business_automation: Anthropic's data says 90% of Cowork sessions are non-coding - this video speaks to the huge non-developer audience, not just programmers."]

Thumbnail: Split screen: a closed laptop with a red arrow pointing at it, versus a phone showing a finished report - text overlay 'IT KEPT WORKING'.

- 0:00 Hook - close the laptop on camera mid-task, cut to black.
- 0:08 What launched: Claude Cowork on mobile + web, rolling out to Max users first.
- 1:30 Live demo: kick off a real workflow (research + report) from the phone.
- 5:00 The reveal: what the agent finished overnight, unedited.
- 8:00 Who this replaces vs. who should use it - and 3 workflows to copy today.

2. AI Now Writes 80% of Its Own Code. Nobody Noticed.

HOOK (FIRST 8S)

The next version of your favourite AI wasn't written by engineers. It was written by the current version. Let me show you the evidence.

Why it hits 10M: ["ai_self_improvement_rsi: Communications of the ACM just asked 'Is Recursive Self-Improvement Really Here?' and a viral report claims AI now writes over 80% of its own code - the topic has mainstream heat this exact week.", "ai_search_trends: 'what are ai agents' and 'llm model' rank in today's top global + India queries - beginner curiosity about how AI actually improves is unserved.", "anthropic_claude_news: Anthropic's new Jacobian Lens reading Claude's hidden 'inner monologue' gives the video a jaw-dropping second act grounded in real research."]

Thumbnail: A robot hand typing on a keyboard whose screen shows its own blueprint - text overlay '80% SELF-WRITTEN'.

- 0:00 Hook - the 80% claim, on screen, with the source.
- 0:08 What recursive self-improvement actually means (60-second explainer).
- 2:00 The evidence: CACM's analysis, Nvidia's ASPIRE self-improving robots, MetaSkill-Evolve agents.
- 6:00 Anthropic's J-Lens: we can now literally read the AI's working memory.
- 9:00 What happens at 100% - and the one skill that stays human.

3. An AI Agent Just Ran a Real Ransomware Attack

HOOK (FIRST 8S)

For the first time in history, a cyberattack was executed by an AI agent - start to finish. Here's how it happened, and why your antivirus never stood a chance.

Why it hits 10M: ["unaddressed_ai_problems: JadePuffer - possibly the first agent-driven ransomware campaign - is in this week's news cycle and researchers are openly calling it a nightmare; fear + firsts = maximum CTR.", "global_ai_news: an open-source model 'as scary as Mythos' plus the US cyber agency using Claude to audit government code give the video a both-sides arms-race arc.", "ai_business_opportunities: the defence gap (agents watching for agents) lets the video end on an actionable 'this is the career/business to start' beat instead of pure doom."]

Thumbnail: Dark terminal with a glowing puffer-fish icon and a padlock snapping shut - text overlay 'AI DID THIS ALONE'.

- 0:00 Hook - the timeline of the attack, dramatised in 8 seconds.
- 0:08 What JadePuffer actually did, step by step (and the human who aimed it).
- 3:00 Why machine-speed attacks break human-speed defences.
- 6:00 The other side: CISA is already using Claude to audit government code.
- 9:00 The opportunity: AI-vs-AI security is the next big career - how to start.

Hewlett Packard Enterprise (HPE) Teams Up With Qblox To Connect Quantum And AI Computing - Yahoo Finance

QUICK TAKE

HPE is partnering with quantum-control specialist Qblox to connect quantum processors with classical AI/HPC infrastructure, targeting hybrid quantum-AI computing workloads. The deal is aimed at making QPUs first-class accelerators inside AI datacentres. Automation angle: hybrid quantum-AI orchestration will need workflow glue - the same skills as classical pipeline automation.

MagiQware Raises €575K Pre-Seed Round to Advance AI Software For Quantum Computing - The Quantum Insider

QUICK TAKE

Berlin-based MagiQware raised a €575K pre-seed round to build AI software for quantum computing - using machine learning to compile, calibrate and error-mitigate quantum programs. It is a bet that AI is the missing software layer that makes near-term quantum hardware usable. Automation angle: 'AI that tunes another machine' is a general pattern - study it once, reuse it in any calibration-heavy client domain.

Geometric Characteristics of Subproblems in Ising-Machine-Assisted Large Neighborhood Search

QUICK TAKE

The paper analyses how QUBO subproblems should be shaped when Ising machines (quantum-annealing-style optimizers) are embedded inside large neighborhood search for combinatorial optimization. It is practical quantum-classical hybrid optimization: the AI-style search loop decides what the quantum-style solver sees. Automation angle: hybrid solver orchestration = a scheduling/routing automation niche with almost no practitioners yet.

Canonical quantization of neurons

QUICK TAKE

Researchers apply canonical quantization - the standard recipe for turning classical systems quantum - to the artificial neuron, deriving quantum models of the basic computational unit of neural networks. It is foundational work on what a genuinely quantum neural network would be. Automation angle: pure research; useful as a 'quantum + AI explained' YouTube segment, not a build target.

Is Recursive Self-Improvement Really Here? - Communications of the ACM

QUICK TAKE

Communications of the ACM examines whether today's AI-assisted AI research - models writing training code, generating data and tuning successors - already constitutes early recursive self-improvement. The piece weighs capability-acceleration evidence against the hype and asks what a real RSI threshold would look like. Automation angle: the definitive explainer to cite in an 'is AI improving itself?' video - high search volume, low-quality competition.

MetaSkill-Evolve: Recursive Self-Improvement of LLM Agents via Two-Timescale Meta-Skill Evolution

QUICK TAKE

MetaSkill-Evolve proposes recursive self-improvement for LLM agents via two-timescale meta-skill evolution: agents accumulate reusable procedural skills, then a slower loop rewrites and improves the skill library itself. Agents get better at getting better, on long-horizon open-ended tasks. Automation angle: the skill-library pattern maps directly onto Claude Code skills - mirror the idea in your own agent setup.

How Nvidia's ASPIRE framework accelerates robot programming with self-improving AI - TechTalks

QUICK TAKE

TechTalks covers Nvidia's ASPIRE framework, where robot-programming agents improve themselves by generating, testing and refining their own control code in simulation. Each iteration feeds back into the next, cutting human programming effort for new manipulation tasks. Automation angle: self-improving code loops are landing in robotics first - the eval-loop design transfers to any agent you build.

Recursive Self-Improvement Nears Tipping Point: AI Now Writes Over 80% of Its Own Code, Triggering Regulatory Alarms - finance.biggo.com

QUICK TAKE

The piece claims frontier labs' models now write the large majority of their own next-version code - with the '80%' figure triggering calls for regulatory attention to self-improvement loops. Whatever the exact number, AI-written AI code is now the norm at leading labs, not the exception. Automation angle: track this trend line for your channel - 'AI writes its own code' consistently outperforms generic AI-news content.

Weak-to-Strong Generalization via Direct On-Policy Distillation

QUICK TAKE

This arXiv work shows a cheaper path for models improving successor models: direct on-policy distillation lets a weaker supervisor transfer reasoning gains to a stronger student without repeating expensive RL. It is automated model improvement - one generation of AI training the next. Automation angle: weak-to-strong pipelines hint at how labs scale quality without humans in the loop - good deep-dive material.

SPEARBench: A Benchmark for Naturalness Evaluation in Streaming Speech-to-Speech Language Models

QUICK TAKE

SPEARBench is a new benchmark measuring whether streaming speech-to-speech models sound natural - pacing, turn-taking and prosody - rather than just transcribing accurately. Existing speech benchmarks miss exactly the qualities that make voice agents feel human. Automation angle: when picking a voice-agent stack, naturalness benchmarks like this matter more than word-error rate.

Expanding Managed Agents in Gemini API: background tasks, remote MCP and more

QUICK TAKE

Google expanded Managed Agents in the Gemini API with background tasks, remote MCP support and more - server-hosted agents that keep working without your own orchestration loop. Remote MCP means Gemini agents can now call the same MCP servers your Claude Code setup uses. Automation angle: MCP is becoming the cross-vendor standard - every MCP server you build now works across Claude AND Gemini; double the portfolio value.

QUICK TAKE

Andhra Pradesh signed a three-year MoU to become what it calls India's first AI-powered tourism state, wiring AI into tourist services, itineraries and state tourism operations. Koo cofounder Mayank Bidawatka shut down PicSee, his AI photo-sharing venture that used facial recognition to auto-share photos with the friends in them. A reminder that thin-wrapper AI consumer apps are struggling to survive in India's market. Anthropic & Claude Code

Anthropic company news + Claude Code feature updates (new commands, hooks, MCP, slash commands, agents, model rollouts).

US cyber agency is using Anthropic's Mythos to audit government code, sources say

QUICK TAKE

Reuters sources say CISA, the US cyber-defence agency, is using Anthropic's Mythos-class Claude model to scan government code repositories for vulnerabilities that foreign spies and cybercriminals could exploit. It is one of the first confirmed high-stakes government deployments of Anthropic's top-tier model for security auditing. Automation angle: AI code-audit pipelines are now a proven government use case - build a Claude Code repo-scanning demo for your portfolio this week.

Copilot goes cheap as Microsoft phases out OpenAI and Anthropic models to cut costs

QUICK TAKE

Microsoft is swapping OpenAI and Anthropic models out of Copilot in Excel, Outlook and other products, replacing them with its cheaper in-house MAI models that already handle tens of thousands of queries a week. The move signals cost, not capability, is now driving enterprise model selection. Automation angle: multi-model routing (cheap model first, frontier model on failure) is a sellable automation pattern - prototype it in n8n.

Anthropic is launching Claude Cowork on mobile and web

QUICK TAKE

Anthropic is bringing Claude Cowork to mobile and web for the first time, rolling out to Max subscribers before wider availability. Tasks started on a desktop can now be monitored and picked up from a phone. Automation angle: record a demo of running a real workflow from your phone via Cowork - timely portfolio + YouTube material this exact week.

Anthropic's Claude Cowork heads to the cloud as data shows 90% of sessions aren't for coding

QUICK TAKE

ZDNet reports Claude Cowork is moving to web, mobile and the cloud, and Anthropic's own data shows about 90% of Cowork sessions are for non-coding work - research, writing, ops and admin tasks. The agent platform is becoming a general work tool, not a developer tool. Automation angle: the non-coding 90% is your market - package Cowork-style agent workflows for ops and admin teams.

Shut Those Laptops! Anthropic Puts Its Claude Cowork Agent on Your Phone

QUICK TAKE

Wired covers Claude Cowork's new ability to keep executing tasks after you close your laptop, with control handed to your phone. Anthropic frames it as part of a broader shift toward smartphone-controlled background agents. Automation angle: 'agents that keep working while you sleep' is a 10M-view hook and a client pitch in one - build one overnight job and film it.

Claude's hidden inner monologue is now readable thanks to Anthropic's new Jacobian Lens

QUICK TAKE

Anthropic researchers found Claude developed an internal working memory ('J-Space') on its own during training, and built a new interpretability tool called the Jacobian Lens (J-Lens) to read it. It makes part of the model's hidden reasoning directly inspectable for the first time. Automation angle: interpretability wins like this feed enterprise trust - cite J-Lens when clients ask 'can we audit what the AI is doing?'.

L'Oreal, Mondelez, and Nestle use AI to speed product development

QUICK TAKE

L'Oreal, Mondelez and Nestle are using AI to compress consumer-product development cycles - L'Oreal to find new uses for ingredients already in its portfolio, the food giants to cut reformulation and testing time. It is concrete AI ROI in R&D, far from chatbots. Automation angle: 'AI for product development' is an underserved automation niche - pitch ingredient/SKU-analysis workflows to CPG-adjacent clients.

Apollo economist warns AI profit gains outside tech could take "well beyond" what Wall Street expects

QUICK TAKE

Apollo's chief economist argues AI-driven profit gains outside the tech sector will take far longer than Wall Street expects, even as Ramp data shows companies sharply increasing AI application spend. Savi's app aims to protect consumers from realistic AI scams like kidnappers demanding ransom

QUICK TAKE

Savi raised \$7M and launched an app to protect consumers from hyper-realistic AI voice-cloning scams, like fake kidnappers demanding ransom. That such an app is needed highlights the gap: there is still no default, carrier- or OS-level defence against AI voice fraud for ordinary people. Automation angle: verification layers against AI-generated content are a wide-open startup category - pick one channel (calls, email, video) and demo a detector.
