YouTube Content Ideas

Three video ideas synthesised by the agent from the rest of this PDF, engineered to plausibly hit 10M views. Each ships with a hook, a thumbnail concept, and a 5-beat outline you can shoot the same week.

1. Claude Wrote 1,000,000 Lines of Code in 11 Days

HOOK (FIRST 8S)

A team just deleted their entire codebase and let an AI rewrite all of it - one million lines in eleven days. I'm going to show you exactly how they did it, and then do it live.

Why it hits 10M: ['anthropic_claude_news: the Bun Zig-to-Rust rewrite by Claude Fable 5 is the biggest publicized AI codebase migration ever - massive built-in curiosity and controversy.', 'ai_search_trends: 'agentic ai', 'build ai agents' and 'ai automation jobs' are all top trending queries in India right now - this title sits on all three.', 'ai_business_automation: McKinsey says employees adopt AI faster than companies - the 'is my job safe' tension gives the video emotional stakes far beyond coders."]

Thumbnail: Split screen: a mountain of red crossed-out code on the left, a glowing '1,000,000 LINES / 11 DAYS' counter on the right, shocked face inset bottom-left.

- 0:00 Hook - the million-line claim, receipts on screen.
- 0:45 What actually happened: Bun, Zig to Rust, and why a runtime rewrite is the hardest test an AI could take.
- 2:30 Live demo: I give Claude Code a real (small) migration and narrate every decision it makes.
- 6:00 Where it broke, what a human still had to do - the honest limits.
- 8:30 What this means for your job in 2026 + how to be the person who directs the AI, not the one it replaces.

2. The AI Price War Just Made Automation Basically Free

HOOK (FIRST 8S)

This week one company cut the price of AI coding agents by eighty percent. Every automation that was too expensive to build last month is now profitable - here are five of them.

Why it hits 10M: ["elon_musk_ai_vision: Grok 4.5's 80% coding-agent cost cut and the GPT-5.6 launch in the same week is a genuine 'everything changed' moment viewers can feel.", 'ai_business_opportunities: the video converts the news into five concrete build-this-now businesses, which turns passive viewers into savers and sharers.', 'ai_search_trends: 'ai automation engineer' and 'ai automation jobs' trending in India means an audience actively searching for exactly this promise."]

Thumbnail: A price tag being slashed from \$100 to \$20 with a robot arm holding the scissors, bold text 'AUTOMATION IS NOW FREE?'

- 0:00 Hook - the 80% price-cut receipt and what it unlocks.
- 1:00 Why agent pricing (not chat pricing) is the number that matters for automation businesses.
- 3:00 Five automations that just became profitable, with real cost math on screen for each.
- 7:00 Live build of the simplest one (an inbox-to-invoice agent) in under 10 minutes.
- 9:30 The catch - hallucination rates, verification layers, and how to price your service anyway.

3. I Built a Self-Improving AI (Wired Says You Can Too)

HOOK (FIRST 8S)

Wired just published how to build an AI that improves itself. Everyone said this was five years away. It's not - I built one this weekend and it's already better than when I started filming.

Why it hits 10M: ["ai_self_improvement_rsi: Wired's 'I Built a Self-Improving AI, and So Can You' plus The Conversation's superintelligence piece put RSI in mainstream feeds this exact week.", 'unaddressed_ai_problems: the video honestly shows where self-improvement stalls (verification, drift), which earns trust and comments instead of hype fatigue.', "ai_search_trends: 'agentic ai' is a top trending search and self-improving agents are its most clickable extreme - curiosity gap is enormous."]

Thumbnail: A robot drawing an upgraded version of itself on a whiteboard, arrow looping back into its own head, text 'IT UPGRADES ITSELF'.

- 0:00 Hook - timelapse of the agent's success rate climbing on its own.
- 1:00 What recursive self-improvement actually means vs the sci-fi version (30-second honest explainer).
- 2:30 The build: an agent that rewrites its own prompts and tools, tested after every change.
- 6:30 The moment it got scary-good, and the moment it quietly broke itself.
- 9:00 Why the frontier labs warn about this + what a beginner should and shouldn't try.

Quantum + AI

Stories addressing both quantum (qubits, quantum hardware/algorithms) and AI/ML. Pure-quantum or pure-AI items are dropped.

Google Study Shows Quantum Computer Can Learn From Its Own Errors While It Computes

QUICK TAKE

Google researchers showed a quantum computer that uses machine-learning-style feedback to learn from its own errors mid-computation, adapting error correction on the fly instead of relying on fixed decoding. It is a concrete case of AI methods making quantum hardware more reliable. Automation angle: watch ML-decoded error correction - it is the pattern that will make quantum-in-the-loop AI services practical.

TSMC's Photonic Ramp Could Be the Quiet Catalyst in AI Chips - 24/7 Wall St.

QUICK TAKE

TSMC is quietly ramping photonic interconnect and co-packaged optics capacity, which analysts flag as a sleeper catalyst for AI chips. Photonic computing and optical I/O directly target the bandwidth wall that limits large-model inference. Automation angle: cheaper AI inference from optical interconnects lowers the unit cost of every agent workflow you sell.

The Other Direction: How AI Could Become The Operating System For Quantum Computing - Seeking Alpha

QUICK TAKE

A Seeking Alpha analysis argues the near-term win is AI acting as the control layer - calibration, compilation, and error mitigation - for quantum processors, rather than quantum speeding up AI. AI as the 'operating system' for QPUs is already showing up in vendor roadmaps. Automation angle: AI-for-quantum tooling is a niche where automation skills transfer directly - quantum labs need workflow builders too.

I Built a Self-Improving AI, and So Can You

QUICK TAKE

A Wired writer built a small self-improving AI system and argues the technique - AI writing and testing improvements to its own scaffolding - is now accessible to individual builders, not just frontier labs. Grok 4.5 Cuts Coding-Agent Cost 80%: Near-Frontier Speed, Higher Hallucinations - Tech Times

Ideas Have Genomes: Benchmarking Scientific Lineage Reasoning and Lineage-Grounded Idea Generation

QUICK TAKE

This arXiv benchmark tests whether models can reason over the lineage of scientific ideas - which papers a concept inherits from - and generate ideas grounded in that lineage, a capability current benchmarks ignore. Automation angle: lineage-aware retrieval is a fresh angle for research-agent demos.

AUTOPILOT VQA: Benchmarking Vision-Language Models for Incident-Centric Dashcam Understanding

QUICK TAKE

AUTOPILOT VQA benchmarks vision-language models on incident-centric dashcam understanding for autonomous driving, probing whether VLMs can reason about accidents rather than just describe scenes. Automation angle: niche safety benchmarks like this reveal where VLM agents still fail - good gap material.

Quoting OpenAI

QUICK TAKE

Simon Willison highlights how OpenAI's ChatGPT Work runs agents in the cloud on web/mobile while the desktop app can execute locally - the same cloud/local split Claude Code users already navigate. Useful signal on where coding-agent execution models are converging. Automation angle: study the execution-environment split - it's the key design decision in every agent product you'll build or review.

OpenAI staffer maps out which of GPT-5.6 Sol's five reasoning levels fits which task complexity

QUICK TAKE

An OpenAI staffer mapped which of GPT-5.6 Sol's five reasoning levels (Light through xhigh, plus multi-agent Max/Ultra modes) fits which task complexity, recommending starting low and escalating. Practical guidance for anyone routing work across model tiers. Automation angle: tiered-reasoning routing is directly portable to Claude Code effort levels - encode it into your workflows for instant cost wins.

OpenAI kills its Atlas browser after just eight months and folds everything into ChatGPT

QUICK TAKE

OpenAI killed its Atlas browser after eight months and folded agentic browsing into the ChatGPT desktop app and a Chrome extension. Standalone AI browsers keep dying; browsing is becoming a feature inside agents instead. Automation angle: don't build on standalone AI browsers - target extensions and agent-native browsing APIs that survive product resets.

OpenAI says GPT 5.6 is the 'preferred model' for Microsoft Copilot 365 amid breakup chatter

QUICK TAKE

OpenAI says GPT-5.6 is now the preferred model across Microsoft 365 Copilot - Word, Excel, PowerPoint, and Chat - amid continuing breakup chatter between the two companies. Enterprise office automation just got a model upgrade by default. Automation angle: Copilot upgrades reset what 'baseline automation' means for clients - sell what Copilot still can't do: cross-app agent workflows.

Meta AI image detector fails to identify some of its own cropped AI images: Analysis

QUICK TAKE

Reuters found Meta's own AI image detector failed to verify 55% of Meta-generated images after simple cropping. Provenance tooling that breaks under trivial edits leaves platforms, journalists, and courts with no reliable way to prove what is synthetic - and nobody has shipped a robust fix. Automation angle: crop-resistant provenance checking is an open product gap with paying customers (newsrooms, insurers, courts).
