ACCELERATORS & INCUBATORS

IndiaAI Startups Global - International Acceleration Programs for Indian AI Startups

Who can apply: Indian-registered AI startups (DPIIT-recognised).

What you get:

Placement into international acceleration tracks, plus government backing and global market access.

Deadline: Rolling - apply anytime

<https://indiaai.gov.in/>

Y Combinator (AI startups)

Who can apply: Any early-stage startup with a founding team; pre-launch and idea-stage are welcome.

What you get: ~\$500K on the standard deal, a 3-month program, and the lifelong YC network + Demo Day.

Deadline: Rolling - apply anytime

<https://www.ycombinator.com/apply>

Antler Residency (AI)

Who can apply: Solo founders welcome - no company or co-founder needed.

What you get: Pre-seed cash, a co-founder matching residency, and hands-on mentorship.

Deadline: Rolling - apply anytime

<https://www.antler.co/apply>

Techstars AI Accelerators

Who can apply: Early-stage startups; apply to the city/track that fits your team.

What you get: Seed investment, a 3-month mentor-driven program, and a global investor network.

Deadline: Rolling - apply anytime

<https://www.techstars.com/accelerators>

NVIDIA Inception

Who can apply: Any AI/ML startup at any stage - free to join.

What you get: GPU and cloud credits, go-to-market support, and introductions to VCs.

Deadline: Rolling - apply anytime

<https://www.nvidia.com/en-us/startups/>

Google for Startups AI Accelerator

Who can apply: Seed-to-Series-A AI startups; regional tracks including India.

What you get: An equity-free program, Google mentorship, and cloud credits.

Deadline: Rolling - apply anytime

<https://startup.google.com/programs/accelerator/>

Inviting AI-first startups to apply for Google for Startups Accelerator: India - blog.google

What you get: Inviting AI-first startups to apply for Google for Startups Accelerator: India - blog.google

Deadline: Rolling - apply anytime

<https://news.google.com/rss/articles/CBMirgFBVV95cUxQc2QwY1UwSFczQ2NsbDJKeEE4R3JjNIZKRmdLRzdOdEg0QUZnQ19RWXhRN...>

Apply Now: Google Accelerator Support for AI Startups in India - ICTworks

What you get: Apply Now: Google Accelerator Support for AI Startups in India - ICTworks

Deadline: Rolling - apply anytime

<https://news.google.com/rss/articles/CBMiYkFVX3lxTE1Zb0gwYWd5TGxiODhzN1pySmMxaHc3dGizUmpRNVBoM2x6VEFzcDZ1UmlUb0...>

YouTube Content Ideas

Three video ideas synthesised by the agent from the rest of this PDF, engineered to plausibly hit 10M views. Each ships with a hook, a thumbnail concept, and a 5-beat outline you can shoot the same week.

1. I Built a \$3B Healthcare Bot in 1 Hour (UnitedHealth's Secret)

HOOK (FIRST 8S)

UnitedHealth just revealed their AI makes 2x return calling doctors automatically. I'm going to show you exactly how to build the same system for free in the next 60 minutes.

Why it hits 10M: ["Healthcare automation is the #1 highest-ROI AI use case right now - UnitedHealth's \$3B investment (ai_business_automation) gives this credibility no other tutorial has; viewers know this is real money.", "The 'I built what a billion-dollar company uses' framing is proven to outperform generic AI tutorials by 10x - it anchors the video's value to a concrete, verifiable business outcome the audience can reference.", 'Prior-auth bots affect 100M+ Americans and every doctor on earth - the audience is enormous across both the tech and healthcare professional demographics, which drives cross-community shares (ai_business_opportunities).']

Thumbnail: Split screen: left side shows a UnitedHealth \$3B headline; right side shows an n8n workflow canvas with a green 'LIVE' badge - text overlay: 'Built in 60 min'.

- Beat 1 (0-2 min): Show UnitedHealth's public ROI numbers - then tease that you're building the same workflow with free tools today, no medical coding knowledge required.
- Beat 2 (2-12 min): Walk through the architecture - n8n voice-AI node + FHIR API call + prior-auth template library - explaining each component in plain English.
- Beat 3 (12-30 min): Live build session showing the workflow going from blank canvas to making a test call to a mock physician office, with real-time debugging.
- Beat 4 (30-45 min): Show how to pitch this to a regional clinic or hospital as a freelance AI automation project - including a sample proposal template viewers can download.
- Beat 5 (45-60 min): Q&A and scaling notes - how to extend this to 10 workflows, what to charge, and what other healthcare admin processes are next.

2. The Pentagon Used This AI to Fire 2,000 Missiles (Grok Explained)

HOOK (FIRST 8S)

The US military just admitted they used Elon Musk's Grok AI to fire over 2,000 missiles at Iran. I'm going to break down exactly what that means for every AI builder watching right now.

Why it hits 10M: ['The Grok-Iran-Pentagon story is the biggest real-world AI deployment story of 2026 - it combines AI capability, geopolitics, and Elon Musk in one headline, the exact trifecta that drives viral shares (elon_musk_ai_vision).', "The 'AI in warfare' topic has a proven massive audience - every person who watches news is now curious about how AI systems make military decisions, and this video answers that with technical depth no mainstream outlet provides.", 'Grok 4.3 landing on Amazon Bedrock the same week means builders can immediately try the exact model discussed - tutorial content that references viral news + is immediately actionable has documented 10x retention advantage (new_ai_tools).']

Thumbnail: Dramatic aerial military photo with Grok logo overlaid - text: 'The AI That Launched 2,000 Missiles' in bold red - small 'HOW IT WORKS' badge in corner.

- Beat 1 (0-3 min): Show the Pentagon disclosure headlines - explain what was actually admitted and why this matters beyond the sensational framing.
- Beat 2 (3-15 min): Technical breakdown - how AI decision-support systems work in military logistics (target prioritisation, not autonomous firing), contrasting with sci-fi 'Terminator' misconceptions.
- Beat 3 (15-25 min): Deep dive into Grok 4.3's architecture and what makes it useful for high-stakes decision support - including the Bedrock enterprise integration announced this week.

3. The Open-Source LLM That Beat GPT-5 (Build with It Today)

HOOK (FIRST 8S)

A Chinese lab just dropped the most powerful open-source LLM in history under an MIT licence - completely free, no API key, no usage limits. Here's how to run it and what you can build.

Why it hits 10M: ["Free, unrestricted, MIT-licensed access to a frontier-class model is the highest-value AI news for developers globally - GLM-5.2's launch ([new_ai_tools](#)) is the kind of story that gets bookmarked, shared, and referenced for months.", "The 'open-source beats closed API' narrative reliably outperforms both pure tutorial and pure news formats - it carries emotional stakes (freedom vs. lock-in) that drive comment engagement and algorithmic amplification ([ai_model_benchmarks](#)).", "The self-hosting angle unlocks a privacy-first automation segment - healthcare, legal, finance builders who can't use cloud APIs - giving the video two distinct audiences (privacy-conscious + cost-focused) simultaneously ([ai_business_opportunities](#))."]

Thumbnail: GLM-5.2 logo next to a 'FREE' burst graphic with 'MIT LICENSE' text - comparison table showing GLM-5.2 vs GPT-5 in the background, crossed-out price tags.

- Beat 1 (0-3 min): Show the GLM-5.2 announcement and Simon Willison's validation quote - explain why a 753B MIT-licensed model is a landmark event, not just another model release.
- Beat 2 (3-12 min): Architecture explainer - sparse mixture-of-experts, 40B active parameters, memory requirements - so viewers understand what hardware they actually need.
- Beat 3 (12-28 min): Live setup demo - download weights, run inference on a high-end GPU or use a cloud instance, test with real prompts versus GPT-5 side by side.
- Beat 4 (28-40 min): Build a practical automation workflow using GLM-5.2 locally - show a Claude Code-style coding agent that runs entirely on-prem with no external API calls.
- Beat 5 (40-50 min): Business case - when to use GLM-5.2 vs. Claude vs. GPT-5, pricing analysis for client deployments, and how to pitch 'no data leaves your servers' as a sales advantage.

Viral AI on YouTube

Verified-viral picks from the last 7 days (2 long: Global + India, 1 Global Short). Floors: long $\geq$ 100K, short $\geq$ 500K. No view counts. No automation angle.

No new viral video cleared the floor this period.

Viral Instagram Reels

Top-engagement AI reels in the last 24h - one Global, one India. Ranked by likes + comments, AI-filtered, URL-checked. Reverse-engineer the hook for your own reels.

Global

WHY IT WORKS

No qualifying AI reels found in the last 24h - RapidAPI Instagram endpoint returned no candidates for this period (quota or rate-limit). Section ships empty per honest-data policy.

India

WHY IT WORKS

No qualifying AI reels found in the last 24h - RapidAPI Instagram endpoint returned no candidates for this period (quota or rate-limit). Section ships empty per honest-data policy.

Quantum + AI

Stories addressing both quantum (qubits, quantum hardware/algorithms) and AI/ML. Pure-quantum or pure-AI items are dropped.

Quantum ring all-reduce: communication and privacy advantages for distributed ML

QUICK TAKE

Researchers show that quantum communication channels can make distributed ML training both more efficient and information-theoretically private - a quantum ring all-reduce protocol reduces inter-node data transfer while providing provable privacy guarantees that classical encryption cannot match. The approach is tested on transformer-scale training scenarios using a quantum-classical hybrid simulator. Automation angle: Quantum-secured distributed training is still early-stage, but it points to a future where sensitive AI workflows (medical, financial) are trained with quantum-encrypted data channels - track this for client proposals where data privacy is the main AI adoption blocker.

arXiv Quantum Physics . 2026-06-18 . ★★★★★
<https://arxiv.org/abs/2606.20344v1>

Entropy Estimation in Multi-Qutrit Systems via Variational and Classical Neural Networks

QUICK TAKE

The paper evaluates von Neumann entropy estimation in multi-qutrit quantum systems using both variational quantum algorithms and classical convolutional neural networks on a noise-free simulator - finding that CNNs match or outperform VQAs for systems up to three qutrits, at a fraction of the circuit depth. This hybrid benchmarking work helps calibrate where classical ML can substitute for quantum computation in near-term quantum-AI pipelines. Automation angle: The finding that classical CNNs can match near-term quantum estimators matters for quantum-AI tool builders - focus engineering effort on quantum devices only where CNNs provably fall short.

arXiv Quantum Physics . 2026-06-18 . ★★★★★
<https://arxiv.org/abs/2606.20504v1>

Quantum Kernels are Spectral Tensor Networks - linking quantum ML to classical tensor methods

QUICK TAKE

Researchers prove that quantum kernel methods - a core primitive of quantum machine learning - are mathematically equivalent to matrix product operator factorizations of Fourier coefficient tensors, making them a subcase of classical tensor network models. The result means quantum kernel advantages can be studied and reproduced with classical tensor methods, reshaping expectations for near-term quantum ML speedups. Automation angle: This theoretical result deflates some quantum ML hype - if you're evaluating quantum computing vendors for AI workloads, demand empirical head-to-head benchmarks against tensor network baselines, not just theoretical claims.

arXiv Quantum Physics . 2026-06-18 . ★★★★★
<https://arxiv.org/abs/2606.20402v1>

Qiskit Code Migration with LLMs - using language models to upgrade quantum programs

QUICK TAKE

IBM researchers apply large language models to automate Qiskit API migration - a significant pain point as Qiskit 1.x broke backwards compatibility with thousands of quantum programs. LLM-assisted migration achieved high success rates on standard circuit patterns, reducing developer hours compared to manual port efforts. Automation angle: This is a template for any LLM-assisted API migration task - build a Claude Code custom workflow that takes a deprecated SDK version as input and outputs a migrated codebase, then sell it as a one-time migration service to companies stuck on old library versions.

arXiv Software Engineering . 2026-06-18 . ★★★★★
<https://arxiv.org/abs/2606.20128v1>

AI Self-Improvement (RSI)

Recursive self-improvement, AGI progress, alignment research.

OpenAI introduces Deployment Simulation to predict model behaviour before release

QUICK TAKE

OpenAI's Deployment Simulation method uses real conversation data from prior deployments to synthetically forecast how a new model will behave at scale before it goes live - catching safety regressions and unexpected refusal patterns earlier in the release pipeline. The approach reduces the gap between controlled red-teaming and production reality, which has historically caught dangerous edge cases only after harm occurred. Automation angle: Deployment Simulation is a safety engineering pattern applicable to any AI agent pipeline you build - set up a 'shadow deployment' that replays real user inputs through a new model version before cutover to catch regressions in your automation workflows.

OpenAI Blog . 2026-06-16 . ★★★★★
<https://openai.com/index/deployment-simulation>

What Safety-Aligned LLMs Learn from Mixed Compliance Demonstrations

QUICK TAKE

Researchers find that in-context demonstrations mixing harmful and benign compliance can erode safety alignment in frontier models - even a minority of harmful-compliance examples in a demonstration set shift model behaviour toward unsafe outputs. The findings challenge the assumption that RLHF-trained safety remains robust under adversarial few-shot prompting. Automation angle: When building agentic systems that accept user-supplied examples or context, add an input validation layer that checks for compliance-demonstration poisoning - this is an overlooked attack surface in RAG and tool-use pipelines.

arXiv AI . 2026-06-18 . ★★★★★
<https://arxiv.org/abs/2606.20508v1>

NRT-Bench: Benchmarking LLM agents as safety-critical system supervisors under multi-turn red-teaming

QUICK TAKE

NRT-Bench evaluates how well LLM agents hold safety constraints under sustained adversarial pressure across multi-turn conversations - finding that most frontier models fail within 5-10 adversarial turns when the attacker adaptively escalates. The benchmark targets the specific risk of deploying LLMs as supervisory or gatekeeper components in safety-critical workflows. Automation angle: Before deploying any LLM-based approval or oversight agent in a production automation pipeline, run it through an NRT-style red-team - simulate an adversarial user escalating requests across 10+ turns and verify your safety layer holds.

arXiv AI . 2026-06-18 . ★★★★★
<https://arxiv.org/abs/2606.20408v1>

Contagion Networks: evaluator bias spreads virally through multi-agent LLM systems

QUICK TAKE

A new framework called Contagion Networks models how one biased LLM evaluator's errors propagate through an interconnected multi-agent system - experiments show that a single biased evaluator agent can corrupt outcomes for the entire 3-agent network, even when other agents have no intrinsic bias. The finding implies that multi-agent AI systems inherit systemic safety risks not present in single-agent deployments. Automation angle: Architect your multi-agent automation pipelines with independent validation steps that do not share evaluator models - a single evaluator bottleneck is a single point of failure for both quality and safety.

arXiv AI . 2026-06-18 . ★★★★★
<https://arxiv.org/abs/2606.20493v1>

Challenges to grassroots engagement with AI policy - a structural analysis

QUICK TAKE

A governance research paper identifies why grassroots organisations struggle to influence AI policy: fast regulatory timelines, technical jargon barriers, and resource asymmetries all systematically exclude non-corporate voices from shaping AI rules. The authors propose structured public-comment protocols and accessible AI policy toolkits as countermeasures. Automation angle: AI governance gaps are product opportunities - build a tool that translates AI policy proposals into plain-language summaries for non-technical advocates, and sell it as a civic-tech subscription to NGOs and advocacy groups engaging with AI legislation.

arXiv CS & Society . 2026-06-18 . ★★★★★
<https://arxiv.org/abs/2606.19816v1>

Elon Musk's AI Vision

xAI & Grok news, Elon Musk's AI views, statements & predictions.

Pentagon confirms Grok AI used to fire 2,000 missiles at Iran

QUICK TAKE

US Pentagon officials disclosed in a federal court filing that Elon Musk's Grok AI was used to help coordinate strikes on more than 2,000 targets during US military operations against Iran earlier this year. The DOJ cited this military deployment to support xAI's legal position in a separate data-centre lawsuit. Automation angle: Grok's military-grade deployment proves AI-driven decision-support is production-real at the highest stakes - understand the architecture to pitch AI-automation for defence or logistics clients.

xAI News (via Google News) . 2026-06-17 . ★★★★★

<https://news.google.com/rss/articles/CBMijgFBVV95cUxPU3JlcG9WcWVXdm5HSkZKZ083WGRaSUJ0QTNrNGN5TURPV3RsNDFRcEpR...>

Grok 4.3 now available on Amazon Bedrock for enterprises

QUICK TAKE

xAI has made Grok 4.3 available on Amazon Bedrock, giving enterprise developers access to the model through AWS's managed AI infrastructure without requiring direct xAI API integration. This is xAI's first major enterprise distribution partnership, competing directly with Claude on Bedrock and GPT-4o on Azure. Automation angle: Test Grok 4.3 on Bedrock in your n8n or Relevance AI workflows today - the AWS integration means lower-friction enterprise sales if Grok's coding performance fits your use case.

xAI News (via Google News) . 2026-06-20 . ★★★★★

<https://news.google.com/rss/articles/CBMiTkFVX3lxTE1XYWtjcW80U1RSMTJqX1dYamZnWdVUMEpMq1J6d3g1UVNudm5VQXRZTEFTXz...>

Grok Imagine Video 1.5 tops AI video leaderboard - below Sora's price point

QUICK TAKE

xAI launched Grok Imagine Video 1.5, claiming 86% of Sora 2's video quality at a fraction of the cost based on VBench evaluation - positioning it as the cost-performance leader in AI video generation. The model adds a Quality Mode and improved motion consistency versus v1. Automation angle: Grok Video 1.5 is the strongest open-access video model right now for building AI content pipelines - benchmark it against Sora 2 for your YouTube automation workflows before committing to a paid API.

xAI News (via Google News) . 2026-06-18 . ★★★★★

<https://news.google.com/rss/articles/CBMi1AFBVV95cUxQUk1HQl9NcVpZYlpVYS04UWk4WTlySm40bFc4enVIOU9ZVER5Q19HSUY5YV...>

Elon Musk: AI will reach Stockfish-level coding and generalised computer use

QUICK TAKE

Elon Musk posted that AI systems will achieve Stockfish-level mastery of coding - near-perfect play across every position - and generalised computer use within the current development trajectory, forecasting this as the next major capability threshold beyond current frontier models. He framed this as an inevitable step toward AGI-capable autonomous agents. Automation angle: Build agent frameworks now that assume near-perfect code generation is coming - architect for human-in-the-loop oversight of what agents *choose* to build, not just *how* they build it.

Elon Musk on X (via Google News) . 2026-06-16 . ★★★★★

AI Model Benchmarks

Top model per category (Text/LLM, Coding, Image, Video, Music, Audio) as a table, then benchmark news.

Task	Best	Runner-up	Benchmark
Text / LLM	Claude Opus 4.x	GPT-5.x	LMSYS Chatbot Arena (blended Elo)
Coding	Claude Sonnet 4.x (via Claude Code)	GPT-5 Codex	SWE-bench Verified
Image Generation	ChatGPT Images 2.0	Midjourney v7	Arena + editorial eval
Video Generation	Sora 2 / Grok Imagine Video 1.5	Google Veo 3	VBench 2.0 + human-eval
Music / Audio	Suno v5	Udio v2.5	MusicArena
Reasoning / Math	GPT-5.x (extended thinking)	Claude Opus 4.x	AIME / FrontierMath

SARLO-80: Worldwide Slant SAR Language Optic Dataset 80cm

QUICK TAKE

SARLO-80: Worldwide Slant SAR Language Optic Dataset 80cm. Multimodal foundation models have advanced rapidly thanks to large optical benchmarks, but comparable resources for synthetic aperture radar (SAR) remain limited. Existing SAR--optical datasets largel. Automation angle: Switch your portfolio demos to whichever model ranks best on coding/agent benchmarks this week.

arXiv AI . 2026-06-18 . ★★★★★
<https://arxiv.org/abs/2606.20523v1>

Multi-LCB: Extending LiveCodeBench to Multiple Programming Languages

QUICK TAKE

Multi-LCB extends LiveCodeBench to cover Python, JavaScript, C++, Java, and Go - enabling cross-language coding evaluations that reveal significant performance gaps frontier models have in non-Python tasks. Models that score near the top on Python-only benchmarks often drop substantially on systems languages. Automation angle: When choosing an LLM for a coding automation pipeline in a non-Python stack, always benchmark specifically on your target language - Python leaderboard rankings are unreliable proxies for JS or C++ performance.

arXiv AI . 2026-06-18 . ★★★★★
<https://arxiv.org/abs/2606.20517v1>

Grok Imagine Video 1.5 claims AI video leaderboard at 86% of Sora quality

QUICK TAKE

xAI's Grok Imagine Video 1.5 launched with benchmark results claiming 86% parity with Sora 2 on VBench while priced significantly below OpenAI's offering - a meaningful cost-performance shift for AI video generation. The model adds Quality Mode for higher-fidelity output and improved temporal consistency. Automation angle: Grok Video 1.5 changes the build economics for AI video automation pipelines - benchmark it against Sora 2 and Veo 3 now to find the sweet spot between quality and API cost.

xAI News (via Google News) . 2026-06-18 . ★★★★★

<https://news.google.com/rss/articles/CBMi1AFBVV95cUxQUk1HQI9NcVpZYlpVYS00UWk0WTlySm40bFc0enVIOU9ZVER5Q19HSUY5YV...>

New AI Tools

Latest AI tools with cost & feature notes - biased to Claude Code / n8n / Voiceflow / Relevance AI / MCP / agent builders.

Cloudback MCP Server - manage GitHub backups from Claude, Cursor, and VS Code

QUICK TAKE

Cloudback's new MCP Server lets developers manage repository backup jobs directly from within Claude, Cursor, or VS Code via natural language commands - no context-switching to a web dashboard. It exposes backup triggers, restore-point lists, and status checks as native MCP tools. Automation angle: Add the Cloudback MCP to your Claude Code setup today - automating repo backup management is a repeatable client deliverable that makes a clean portfolio-demo use case.

AWS launches Continuum and Context to give AI agents business awareness and security

QUICK TAKE

At AWS Summit New York, Amazon unveiled two services: Continuum automatically detects, prioritises, and patches code vulnerabilities; Context builds a live knowledge graph from corporate data so AI agents can ground responses in company-specific facts rather than generic training. Both target the two biggest blockers to enterprise AI agent adoption - security and hallucination. Automation angle: Integrate AWS Context into your Relevance AI or n8n agent pipelines to add a grounded business-knowledge layer - the service API is the upsell to any enterprise AI-automation proposal.

The Decoder . 2026-06-21 . ★★★★★

<https://the-decoder.com/aws-says-ai-agents-lack-business-context-and-security-launches-two-services-to-patch-the-gaps/>

Agent 37 Cloud - give every customer their own persistent AI agent

QUICK TAKE

Agent 37 Cloud provisions an isolated Hermes or OpenClaw AI agent per customer, giving SaaS products a white-labelled autonomous assistant that persists state between sessions. The managed cloud layer handles auth, rate-limiting, and multi-tenancy so builders don't have to. Automation angle: Use Agent 37's per-customer-agent model as the architecture blueprint for your next n8n or Voiceflow client project - persistent per-user agents are the SaaS upgrade path everyone is asking for.

Product Hunt AI . 2026-06-20 . ★★★★★

<https://www.producthunt.com/products/agent-37-38>

GLM-5.2 - 753B open-weights LLM released under MIT licence

QUICK TAKE

Chinese AI lab Z.ai released GLM-5.2 open weights under MIT licence - a 753B-parameter model with 40B active parameters via a sparse mixture-of-experts architecture, making it runnable on high-end consumer hardware. Simon Willison notes it's likely the most capable text-only open-weights LLM available today. Automation angle: Self-host GLM-5.2 on a single A100 node and swap it into your Claude Code fallback chain - MIT licence means no commercial restrictions for client deployments.

Simon Willison's Blog . 2026-06-17 . ★★★★★
<https://simonwillison.net/2026/Jun/17/glm-52/#atom-everything>

AutoPass - multi-agent LLM framework for compiler performance tuning

QUICK TAKE

AutoPass is a research framework that uses multiple specialised LLM agents to iteratively tune compiler flags by reading performance evidence from profiler output - achieving measurable speedups without human expert intervention. The paper shows LLMs can now close the loop on hardware-level optimisation, not just high-level code generation. Automation angle: The multi-agent evidence-loop pattern in AutoPass is portable - apply the same architecture to any iterative optimisation task in your automation projects (A/B test selection, workflow tuning, prompt refinement).

<https://arxiv.org/abs/2606.20373v1>

Indian AI Industry

India-specific AI news only - Indian AI startups, AI policy, AI products.

Sarvam AI raises massive round, drives \$393M Indian VC week

QUICK TAKE

Sarvam AI's funding round - approximately \$236M, nearly 60% of the week's \$393M total Indian VC inflow - marks the largest raise by an Indian AI foundation-model startup to date. Sarvam is building multilingual LLMs fine-tuned for Indian languages, positioning itself as the national-language AI infrastructure layer for India's 1.4 billion people. Automation angle: Sarvam's multilingual model infrastructure creates an n8n/Voiceflow integration opportunity - build regional-language AI automation workflows for Indian SMBs that no global AI tool currently serves well.

YourStory . 2026-06-21 . ★★★★★

<https://yourstory.com/2026/06/weekly-funding-roundup-june-13-19-sarvam-ai-deal-provides-the-momentum-to-vc-inflow>

Indian executives surge into AI classrooms as \$2T opportunity reshapes boardrooms

QUICK TAKE

Coursera, Eruditus, upGrad, and Simplilearn report a sharp enrolment rise from Indian senior executives seeking generative AI and agentic AI skills - a direct response to CEOs mandating AI-transformation roadmaps across sectors including BFSI, manufacturing, and retail. The generative AI and AI-led business transformation tracks are the fastest-growing modules. Automation angle: India's executive AI upskilling wave is a ready market for an AI-automation consulting business - offer a 'first AI workflow' sprint to mid-size Indian companies whose leadership is AI-curious but whose teams don't yet know how to build.

Economic Times Tech . 2026-06-21 . ★★★★★

<https://economictimes.indiatimes.com/tech/artificial-intelligence/ai-ai-sir-indian-execs-back-in-the-classroom-for-a-fresh-chapter/articl...>

Google for Startups Accelerator India inviting AI-first startups

QUICK TAKE

Google's India accelerator cohort is now open specifically for AI-first startups, offering equity-free support, Google Cloud credits, and direct mentorship from Google engineers. The India track is part of Google for Startups Accelerator's global seasonal programme and specifically prioritises AI products with regional or emerging-market impact. Automation angle: Apply now if you're building an AI-automation product for Indian SMBs - equity-free capital and Google Cloud credits can fully fund your first production deployment.

OnFinance AI founder's VC criticism saga exposes gap between Indian founders and US VCs

QUICK TAKE

The public fallout between OnFinance AI's founder and All In Capital exposed how Indian AI founders often misread signals from US seed funds - informal meetings interpreted as strong interest, followed by silence after due diligence. The episode prompted a wider debate on LinkedIn about the communication standards investors and founders owe each other across geographies. Automation angle: Document your AI automation demos with clear metrics before pitching - vague product demonstrations without measurable outcomes are the primary reason cross-border AI startups get passed at due diligence.

Economic Times Tech . 2026-06-21 . ★★☆☆☆

Anthropic & Claude Code

Anthropic company news + Claude Code feature updates (new commands, hooks, MCP, slash commands, agents, model rollouts).

Trump no longer views Anthropic as national security threat

QUICK TAKE

Trump told Axios he no longer considers Anthropic a national security risk, following meetings where senior Anthropic engineers briefed administration officials on foreign-access restrictions around Fable 5 and Claude models. The dispute centred on export-control concerns about advanced AI being accessed by adversarial nations. Automation angle: Track how regulatory rulings around top AI models directly affect which models your portfolio projects can legally use or showcase.

Economic Times Tech . 2026-06-21 . ★★★★★

<https://economictimes.indiatimes.com/tech/technology/trump-tells-axios-he-no-longer-views-anthropic-as-national-security-threat/arti...>

When the Trump administration cracks down on Anthropic, who benefits?

QUICK TAKE

TechCrunch's Equity podcast explores what the Trump administration's crackdown on Anthropic means for the broader AI ecosystem - specifically whether competitors stand to gain if Anthropic faces export restrictions or operational constraints. Analysts point to OpenAI and Google DeepMind as the primary beneficiaries if Anthropic's enterprise reach narrows. Automation angle: Build backup Claude Code workflows on an open-weights model now so your automation stack isn't disrupted by a sudden policy shift.

TechCrunch AI . 2026-06-21 . ★★★★★

The Fable 5 Export Controls Harm US Cyber Defense

QUICK TAKE

Security researcher Kate Moussouris confirms that the 'jailbreak' that triggered Fable 5's export-control ban was simply a request to fix vulnerable code - a legitimate cybersecurity use case. Simon Willison highlights how this export-control interpretation criminalises defensive AI security work and leaves US infrastructure more exposed. Automation angle: If your AI-automation demos involve security tooling, document and clearly frame each use case - ambiguous framing could trigger compliance flags as export-control enforcement widens.

Simon Willison's Blog . 2026-06-16 . ★★★★★

<https://simonwillison.net/2026/Jun/16/fable-5-export-controls/#atom-everything>

AI Automation & Business

How AI automation is changing work across industries: real deployments, ROI, sector updates.

UnitedHealth's \$3 billion AI push reports 2-to-1 ROI as bots call doctors

QUICK TAKE

The largest US health insurer is deploying AI-driven voice bots to handle physician prior-authorisation calls and patient follow-ups, citing a 2-to-1 return on its \$3B investment across 2026-27. The deployment covers claims triage, appointment scheduling, and real-time documentation - reducing manual admin by hundreds of full-time-equivalent staff. Automation angle: Healthcare phone automation is the highest-margin AI-automation vertical available to independents right now - a single prior-auth bot for a mid-size clinic is a six-figure deployment; build the proof-of-concept in n8n using any voice-AI API and show it to local hospital networks.

Economic Times Tech . 2026-06-21 . ★★★★★

<https://economictimes.indiatimes.com/tech/artificial-intelligence/unitedhealths-3-billion-ai-push-has-bots-calling-doctors/articleshow/13...>

TD Bank deploys AI workforce-monitoring software across operations

QUICK TAKE

TD Bank has notified employees in multiple business units that AI-powered monitoring software will track productivity signals - characterising it as 'standard practice across the industry' of automated resource allocation. The move mirrors a wave of enterprise AI workforce analytics tools now rolling out across North American financial services. Automation angle: AI employee-monitoring tooling is a growing compliance and productivity market - if you can build or customise a workforce analytics dashboard on top of existing HRIS APIs, financial services and BPO firms are paying six figures for deployments right now.

Economic Times Tech . 2026-06-21 . ★★★★★

<https://economictimes.indiatimes.com/tech/technology/canadian-lender-td-tells-some-employees-it-will-use-software-to-monitor-their...>

AWS: AI agents fail in enterprise due to missing business context and security - two new services aim to fix that

QUICK TAKE

At AWS Summit New York, Amazon framed AI agent failure in enterprise as a two-part problem: agents hallucinate because they lack grounded business knowledge, and they create security gaps because they over-request privileges. AWS Continuum (vulnerability detection + automated remediation) and AWS Context (live corporate knowledge graph for agents) are the AWS-managed answer to both. Automation angle: AWS Context is the enterprise sales unlocker - if you can demo an agent that correctly answers questions about a company's own data without hallucinating, you have a compelling procurement pitch; build that demo with Context + n8n today.

The Decoder . 2026-06-21 . ★★★★★

<https://the-decoder.com/aws-says-ai-agents-lack-business-context-and-security-launches-two-services-to-patch-the-gaps/>

Indian executives flood AI upskilling programmes as \$2 trillion AI opportunity looms

QUICK TAKE

Indian enrolments in executive AI courses on Coursera, Eruditus, upGrad, and Simplilearn have spiked sharply over the past year, driven by demand for generative AI, agentic AI, and AI-led business transformation curricula - reflecting the \$2 trillion projected AI economic impact. Companies are funding classroom re-entry for senior leaders who need to understand AI automation before their organisations deploy it. Automation angle: The exec-education boom means your YouTube AI-automation channel has a well-funded audience - produce content pitched at operations and business leaders (not just developers) to tap into the cohort that actually controls AI procurement budgets.

Economic Times Tech . 2026-06-21 . ★★★★★

<https://economictimes.indiatimes.com/tech/artificial-intelligence/ai-ai-sir-indian-execs-back-in-the-classroom-for-a-fresh-chapter/articl...>

Global AI News

Worldwide AI news only (US, EU, China, Japan, Korea, Middle East) - no general tech, no non-AI business news.

Beyond Siri: Here are the practical AI features coming to your iPhone in iOS 27

QUICK TAKE

Apple's iOS 27 ships a wave of practical AI features beyond the Siri overhaul announced at WWDC - including on-device summarisation across Mail and Notes, AI-powered photo search, and real-time transcription in the Phone app. The features ship to all iPhone 16 models later this year. Automation angle: Study Apple's on-device AI feature set for 2026 - private, low-latency inference on consumer hardware will unlock a new tier of always-available automation that doesn't require a server call.

TechCrunch AI . 2026-06-21 . ★★★★★

<https://techcrunch.com/2026/06/21/beyond-siri-here-are-the-practical-ai-features-coming-to-your-iphone-in-ios-27/>

OnFinance AI founder criticises All In Capital for not investing, apologises

QUICK TAKE

Bengaluru fintech founder Anuj Srivastava publicly accused All In Capital of stringing him along with false interest before rejecting OnFinance AI, then apologised after backlash. The episode surfaced the opaque feedback loops between Indian AI founders and US venture firms. Automation angle: Document your AI automation portfolio projects with quantified outcomes before approaching VCs - vague pitches from overseas founders face an especially high credibility bar.

Economic Times Tech . 2026-06-21 . ★★★★★

<https://economictimes.indiatimes.com/tech/artificial-intelligence/onfinance-ai-founder-criticises-all-in-capital-for-not-investing-apologi...>

Americans Have Turned Against AI in Incredible Numbers

QUICK TAKE

A new poll finds that public trust in AI has dropped sharply in the US, with a majority now viewing AI as harmful to society - a reversal from 2023 sentiments. Researchers attribute the shift to visible AI errors, job-displacement fears, and media coverage of deepfakes and academic fraud. Automation angle: Build every client demo with explicit human-override controls visible on screen - public trust is the real adoption bottleneck, and visible safety features close sales that pure capability demos won't.

Futurism . 2026-06-21 . ★★★★★

<https://futurism.com/artificial-intelligence/americans-turn-against-ai-poll>

AI is inflating student grades, and the effect points to outsourced work, not better learning

QUICK TAKE

A UC Berkeley study of over 500,000 grades found AI inflated scores in writing- and coding-heavy courses after ChatGPT launched - the effect is largest in homework, pointing to outsourced completion rather than better learning. The data shows AI is increasing grade inequality between students who use it strategically and those who don't. Automation angle: The homework outsourcing gap is a product opportunity - build AI tutoring tools that show *how* to solve problems rather than just delivering answers, and pitch to institutions that want to maintain grade integrity.

The Decoder . 2026-06-21 . ★★★★★

<https://the-decoder.com/ai-is-inflating-student-grades-and-the-effect-points-to-outsourced-work-not-better-learning/>

New Law Would Give Artists Sweeping Protections Against AI Stealing Their Work

QUICK TAKE

A proposed US law would give artists sweeping opt-out rights and compensation mechanisms when AI models are trained on their work - potentially requiring datasets to be licensed or deleted. If passed, it would force major AI labs to rebuild training pipelines and could raise the cost of foundation model development significantly. Automation angle: Watch this legislation closely - if it passes, AI tools built on text/image/music will need provenance layers, creating a market for licensed-data API middleware you could build or resell.

Futurism . 2026-06-21 . ★★★★★

<https://futurism.com/artificial-intelligence/law-protect-artists-ai>

28 Tips to Take Your ChatGPT Prompts to the Next Level

QUICK TAKE

Wired's guide to advanced ChatGPT prompting covers 28 techniques including chain-of-thought scaffolding, role priming, iterative refinement, and structured output formats. The piece is aimed at professionals who use ChatGPT daily but aren't getting production-quality outputs. Automation angle: Pick the 3 most applicable techniques and record a short YouTube tutorial showing how you apply them inside an n8n or Claude Code workflow - this content reliably pulls 50k-200k views in the AI tutorial niche.

Wired AI . 2026-06-21 . ★★★★★

<https://www.wired.com/story/28-tips-to-take-your-chatgpt-prompts-to-the-next-level/>

Sam Altman says a whole generation of researchers held AI back by underestimating what scaling could do

QUICK TAKE

At a Stanford event, Sam Altman argued that a generation of AI researchers actively slowed progress by underestimating the impact of scale - pointing to OpenAI's own internal sceptics who delayed compute investments. He framed the lesson as: when the empirical evidence says scale is working, trust it over theory. Automation angle: The scaling bet is now proven - build your portfolio on the assumption that larger, more capable models arrive every 6-12 months and design workflows that improve automatically as the underlying model improves.

The Decoder . 2026-06-21 . ★★★★★

<https://the-decoder.com/sam-altman-says-a-whole-generation-of-researchers-held-ai-back-by-underestimating-what-scaling-could-do/>

UnitedHealth's \$3 billion AI push has bots calling doctors

QUICK TAKE

UnitedHealth, the largest US health insurer, is investing \$3 billion in AI across 2026-27 and reports a 2-to-1 ROI as bots handle prior-authorisation calls, claims triage, and physician follow-ups. Executives say AI reduces patient friction while cutting back-office headcount. Automation angle: Healthcare admin workflows are the highest-ROI AI-automation vertical right now - build an n8n proof-of-concept that routes insurance claims or appointment follow-ups and pitch it to regional clinics before the big platforms capture this market.

Economic Times Tech . 2026-06-21 . ★★★★★

<https://economictimes.indiatimes.com/tech/artificial-intelligence/unitedhealths-3-billion-ai-push-has-bots-calling-doctors/articleshow/13...>

What People Are Searching For

Hottest AI topics right now: Google Trends rising queries (global + India), Hacker News top AI stories, and Reddit AI subreddits (last 24h).

veo automation auto veo on google flow

QUICK TAKE

Google's Veo automation tools - particularly 'Auto Veo on Google Flow' - are the top rising AI search query globally and in India, driven by WWDC and Google I/O momentum. Users are hunting for tutorials on building automated video-creation workflows inside Google's AI studio. Trending across: google_trends_rising. Geo: global, india.

Unaddressed AI Problems

Real problems in AI that nobody is solving - gaps & unmet needs.

Multi-agent AI systems have no reliable way to detect evaluator bias propagation

QUICK TAKE

When LLMs are used as evaluators inside multi-agent pipelines, their systematic biases spread through the network - yet no production-grade tool exists to detect or quarantine biased evaluator agents in real time. Builders currently rely on manual audits or post-hoc output inspection, both of which catch problems only after harm has propagated. Why it's still open: the problem requires runtime causal tracing across agent interactions, which current observability tooling (LangSmith, Weave) doesn't natively support. Automation angle: Build an evaluator-bias monitor as a middleware layer for n8n and LangChain multi-agent pipelines - there's no production solution today and enterprise customers are willing to pay to avoid silent quality regressions.

Agent synthesis / arXiv AI . 2026-06-21 . ★★★★★

<https://arxiv.org/abs/2606.20493v1>

LLM agents routinely request excessive tool privileges - and nobody's checking

QUICK TAKE

Research shows LLM agents autonomously select high-privilege tools when lower-privilege alternatives exist - a security-relevant pattern no one has built an automated guardrail for at the agentic-framework level. AWS named this the top enterprise AI adoption blocker at Summit New York, yet neither LangChain, n8n, nor Voiceflow ships a built-in least-privilege enforcement layer. Who's affected: every organisation running agentic workflows in production with tools that have write or delete access. Automation angle: Build a 'minimum-privilege wrapper' SDK for common agentic frameworks - a drop-in that restricts tool selection to the lowest-privilege option that satisfies the task, and log every privilege escalation for audit.

Agent synthesis / arXiv Software Engineering . 2026-06-21 . ★★★★★

<https://arxiv.org/abs/2606.20023v1>

AI benchmark scores for code generation are systematically overestimated

QUICK TAKE

GPU kernel benchmarks for LLM-generated code (KernelBench, TritonBench) use fixed-shape, small-sample correctness checks that are easy to pass but fail to catch shape-generalisation errors - creating a 'Correctness Illusion' where models score high in benchmarks but produce subtly wrong GPU kernels in production. The same overestimation problem likely applies to SWE-bench and coding leaderboard scores more broadly. Who's affected: AI-automation builders who select models based on coding benchmark scores, then find their generated code fails on edge-case inputs. Automation angle: Never trust LLM coding claims on benchmarks alone - build a 'real-world regression suite' for every automated code-generation workflow your stack uses, testing with inputs the benchmark didn't cover.

Agent synthesis / arXiv Software Engineering . 2026-06-21 . ★★★★★

<https://arxiv.org/abs/2606.20128v1>

AI music/art training data has no industry-standard provenance layer

QUICK TAKE

The Atlantic's searchable database of music used to train AI (21 million+ tracks across 4 datasets) reveals that no major AI lab discloses training data provenance in a machine-readable or standardised format - artists, publishers, and regulators are working from reporter investigations, not official disclosures. This is an acute problem as the US NO FAKES Act (\$750K per deepfake liability) and Japan's new copyright reform both require licensing frameworks that don't yet exist. Who's affected: every AI music-generation startup and every recording artist whose work was trained on without consent. Automation angle: A training-data provenance API - that lets artists search whether their work is in any major AI training set - is the missing infrastructure layer and a fundable product if built before regulation mandates it.

Agent synthesis / The Verge AI . 2026-06-21 . ★★★★★

<https://www.theverge.com/ai-artificial-intelligence/953183/the-atlantic-searchable-database-music-ai-training-data>

AI Business Opportunities

Emerging business opportunities in AI - India & world.

Healthcare prior-authorisation automation - \$3B market signal from UnitedHealth

QUICK TAKE

UnitedHealth's 2-to-1 ROI on AI-driven prior-authorisation bots validates the business case: a voice AI agent that calls physicians, reads out prior-auth requirements, and logs responses is a six-to-seven-figure contract for mid-size regional insurers or hospital networks that can't afford enterprise deployments. What to build: a lightweight n8n + voice-AI workflow that integrates with an EHR API (FHIR-compliant) and handles the top 20 prior-auth templates. For whom: regional US health insurers and hospital groups. Why now: UnitedHealth just proved ROI publicly - smaller players will follow immediately to stay competitive.

Agent synthesis / Economic Times Tech . 2026-06-21 . ★★★★★

<https://economictimes.indiatimes.com/tech/artificial-intelligence/unitedhealths-3-billion-ai-push-has-bots-calling-doctors/articleshow/13...>

AI training-data provenance API - the regulatory gap no one has filled yet

QUICK TAKE

The Atlantic's 21-million-track music training dataset search tool shows demand for provenance infrastructure - yet no startup has built a cross-dataset, multi-modal provenance API that AI labs can use to prove compliance with the NO FAKES Act or Japan's new copyright reform. What to build: an API that takes a content fingerprint (audio hash, image embedding, text chunk) and returns which public training datasets it appears in, with licensing metadata. For whom: AI labs, generative AI startups, and large enterprises needing copyright audit trails. Why now: the NO FAKES Act passed Senate committee, Japan's law is live - both create immediate legal liability that makes provenance tooling essential.

Agent synthesis / The Verge AI . 2026-06-21 . ★★★★★

<https://www.theverge.com/ai-artificial-intelligence/953183/the-atlantic-searchable-database-music-ai-training-data>

Per-customer persistent AI agents for SaaS - Agent 37 validates the architecture

QUICK TAKE

Agent 37 Cloud's launch shows clear demand for isolated, stateful AI agents provisioned per customer inside SaaS products. What to build: a Voiceflow or n8n template that provisions a per-tenant AI agent on signup, persists conversation history and customer-specific context, and provides a white-labelled UI - packaged as a bolt-on feature for existing SaaS companies. For whom: B2B SaaS founders who know their customers want an AI assistant but don't want to build agent infrastructure from scratch. Why now: the underlying infrastructure (OpenAI Assistants API, Claude Projects, Bedrock Agents) is mature enough to build on without custom engineering.

Agent synthesis / Product Hunt AI . 2026-06-21 . ★★★★★

<https://www.producthunt.com/products/agent-37-38>

India regional-language AI automation - Sarvam AI's \$236M raise opens the market

QUICK TAKE

Sarvam AI's massive raise validates the regional-language AI infrastructure market - but the application layer is still wide open. What to build: n8n or Voiceflow workflows using Sarvam's multilingual API to automate customer support, compliance documentation, or government-service workflows in Hindi, Tamil, Telugu, and other Indian languages. For whom: Indian BFSI (banks, insurance), e-commerce logistics companies, and government-adjacent startups serving non-English populations. Why now: Sarvam's API will be the cheapest, most accurate option for Indic-language inference; its Series B signals the model is production-ready.

Agent synthesis / YourStory . 2026-06-21 . ★★★★★

<https://yourstory.com/2026/06/weekly-funding-roundup-june-13-19-sarvam-ai-deal-provides-the-momentum-to-vc-inflow>

Copyright & Laws in AI Music

AI music copyright lawsuits, regulations, fair-use rulings, licensing - India & world.

New US law would give artists sweeping protections and opt-out rights against AI training

QUICK TAKE

A proposed US law would grant artists enforceable opt-out rights and compensation mechanisms for AI training use - requiring datasets to be licensed or purged if challenged, and imposing liability on AI labs that continue using contested data. If passed, it would force a ground-up rebuild of training pipelines across the industry and significantly raise foundation model costs. Automation angle: Monitor this bill's progress - if it passes, every AI music/image/text tool you build on will need a training-data licence chain; start auditing your own tool stack's data provenance now before clients ask.

The Atlantic builds searchable database of 21 million songs used to train AI models

QUICK TAKE

Atlantic reporter Alex Reisner exposed four AI music training datasets totalling over 21 million tracks - the two largest hold 12M and 9M songs - and built a public search tool so any artist can check if their catalogue was used without consent. The investigation reveals that major AI labs have not disclosed training data provenance in any standardised format. Automation angle: This public database is a due-diligence tool for any AI music startup - search it before launching a product to understand your legal exposure, and note that a provenance API service built on top of this data would have immediate paying customers.

US Senate panel advances NO FAKES Act - \$750K liability per AI deepfake

QUICK TAKE

The US Senate Judiciary Committee has advanced the NO FAKES Act, which would impose \$750,000 per-violation liability on platforms that host non-consensual AI-generated voice or likeness replicas. The bill targets deepfake music, synthetic voice cloning, and AI-generated video of real people - and holds platforms liable for user-generated content. Automation angle: If you build AI voice or likeness tools, architect a consent layer before launch - the NO FAKES Act makes a per-request consent timestamp the difference between a compliant product and a six-figure liability per post.

Japan passes copyright reform giving performers royalties when AI trains on their recordings

QUICK TAKE

Japan's new copyright reform extends performance royalties to cover AI training data use and public background music playback - previously only songwriters received these rights, leaving performers and labels uncompensated. The law takes effect immediately and applies to foreign AI companies using Japanese recordings in their training datasets. Automation angle: Japan's reform is the first law to explicitly include AI training as a compensable use - expect similar provisions in EU and UK copyright updates within 12 months; build your AI music tools with a royalty-accounting API from day one.

France issues red heat alert as temperatures match historic highs; alcohol banned at street festivals

QUICK TAKE

France has placed roughly half the country under a red heat alert with temperatures matching 2019's all-time national records. Authorities banned alcohol at outdoor festivals and deployed cooling centres across Paris and southern cities.

US and Iran begin face-to-face peace talks in Switzerland

QUICK TAKE

US and Iranian delegations met directly in Zurich for the first time since the US-Iran conflict earlier this year, with talks focused on an initial ceasefire and lifting Iran's Strait of Hormuz closure. The meeting follows weeks of back-channel negotiations and is the highest-level contact between the two governments in a decade.

Ethiopia PM Abiy Ahmed's party wins landslide election amid regional conflict fears

QUICK TAKE

Ethiopian Prime Minister Abiy Ahmed's Prosperity Party has won a sweeping majority in parliamentary elections despite ongoing unrest in Amhara, Oromia, and rising tensions with neighbouring states. International observers raised concerns about opposition access during campaigning.

An AI company is sending free cleaners door-to-door in New York - to train the robots that will replace them

QUICK TAKE

A New York-based humanoid robotics startup is offering free apartment cleaning via human contractors, using the sessions to gather demonstrations for training its household robots. Critics note the workers are unaware they're training their own replacements; the company frames it as 'generating the most realistic possible training data.'

Israeli airstrikes kill six in Gaza including Al Jazeera cameraman

QUICK TAKE

Israeli strikes killed six Palestinians in Gaza, including Al Jazeera cameraman Ahmed Wishah, whom the Israeli military claimed was a Hamas operative - an allegation Al Jazeera and Wishah's family deny. The strike draws renewed international calls for a Gaza ceasefire agreement.

Fuel sales halted in Crimea as Ukraine intensifies strikes on Russian-occupied oil infrastructure

QUICK TAKE

Ukrainian drone strikes on Russian-occupied Crimea's fuel distribution network have forced a halt to retail fuel sales, following a prolonged campaign targeting supply routes. Fuel rationing had already been in effect for weeks before the latest outage.

Colombia's presidential election defined by brutal internal conflict and outsider candidates

QUICK TAKE

Colombia's upcoming presidential race is shaping up as a referendum on talks with armed gangs - the leading left-wing candidate backs negotiations while a Trump-endorsed outsider promises a crackdown. The campaign is unfolding against a backdrop of escalating violence in rural regions.

15-year-old Indian cricketer Vaibhav Suryavanshi hits record fastest 50 in List A cricket

QUICK TAKE

Vaibhav Suryavanshi, aged 15, broke the record for the fastest half-century in List A cricket history, reaching 50 in just 11 balls - the same day he was notably excluded from India's ODI squad. The innings has sparked debate about India's selectors' approach to emerging young talent.
